

THE **INDUSTRY** **SOLUTION** FOR AUTOMATION

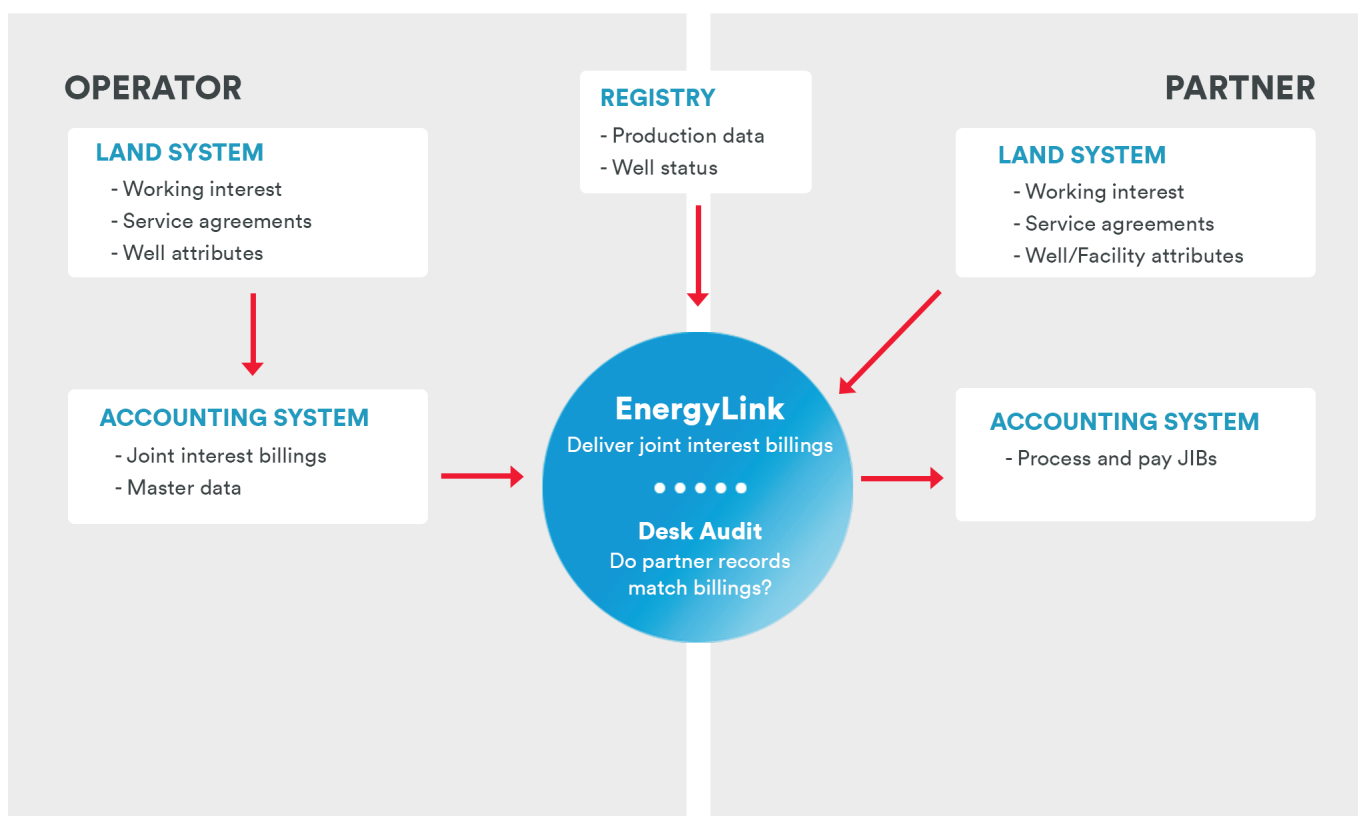

Desk Audit

Automate → Save Time → Save Money

What is Desk Audit?

EnergyLink allows companies to automate most of the routine coding, giving you more time to verify charges. Our newest module, Desk Audit, now allows companies to drastically reduce time spent on routine verification, freeing up even more time to focus on exceptions.

Our Solution: An Industry Approach

- Interface agreement/contract details into EnergyLink
- Well/Facility Attribute Information (well status, name, API)
- Working Interest
- Service Agreement Rates
- Load well production data from regulatory agencies
- Identify anomalies in operator JIB data by comparing to agreement contract details and production data

More Automation with Desk Audit

EnergyLink will now be able to utilize the data loaded from your land system to automate identification of anomalies, allowing JV accountants to spend time on analysis rather than basic identification of issues.
